

In my journey so far, some directions unfolded, others receded. Each leaving a trace. These are some of the attempts that did not continue forward, and the feedback I received and carry into the next direction.

Fugro — Data Governance Analyst (Apr. 2025)

Outcome: Interview went well and there was a strong mutual fit, but a hiring freeze occurred due to shifting project priorities.

Feedback: Organizational contingencies shape opportunities. Adaptability and resilience are as important as competence in navigating early-career landscapes.

RWTH Aachen University — Research Assistant (Nov. 2023 - Oct. 2025)

Outcome: Contract concluded as I chose to transition closer to industry-embedded work.

Feedback: Sometimes an ending is a conscious pivot. If you want to know more about the journey, you can read it [here](#).

WEBB Traders — Graduate Quantitative Developer (Nov. 2025)

Outcome: Technical solution was functional but not optimized (data structures and performance).

Feedback: Optimal design emerges from both correctness and elegance. Efficiency matters, and this encouraged deeper attention to algorithmic structure.

Hai Robotics — Field Application Engineer (Dec. 2025)

Outcome: Declined due to personal considerations regarding long-term travel requirements.

Feedback: Alignment with family and personal rhythm is a prerequisite for sustained contribution.

Tiledmedia — Web Engineer (Feb. 2026)

Outcome: An acceptable technical solution, but presentation and demonstration lacked clarity and depth relative to expectations.

Feedback: Communication is part of engineering. Conveying intent and data flows with precision matters as much as the code itself, in bridging internal logic with external legibility.

(Side note: The piano in the HIG building and warm conversations remain fond memories of the visit.)

Huisman — Junior Data Analyst (Feb. 2026)

Outcome: Positive feedback on both presentation and motivation letter; however, the role's primary focus on frontend-intensive coding differed from my view of programming as a tool for addressing broader engineering problems.

Feedback: Clarity of motivation signals integrity. Staying aligned with how one conceives her/his work sharpened the ability to articulate intent in future conversations.

PhD — N-Dimensional Point Cloud Data Management for Adaptive Meshfree Urban Wind Simulation, TU Delft (Feb. 2026)

Outcome: No interview.

Feedback: "The selection process was highly competitive."

Fugro — Data Analyst (Mar. 2026)

Outcome: No interview.

Feedback: "I shared your profile with the hiring manager, and although she appreciated your strong analytical background and experience in geodata analytics, she unfortunately has decided not to move forward with your application.

The role is developing in a direction that requires a stronger engineering focus, and at this stage we are looking for a profile that aligns more closely with those technical requirements. Currently we are also re-assessing the role description again internally."

*Note: I interviewed with Fugro before, and Ms. Ümit Nesar from the Human Resources department was very nice. I'm grateful for her kindness and efforts.

PhD — Modelling Urban Resilience and Regreening, Universiteit Leiden (Apr. 2026)

Outcome: No interview.

Feedback: "We received over 300 applications for this role, which meant we had to make very selective choices. While your background in Geomatics at TU Delft is

strong, the focus of your experience is primarily on building morphology. For this role, we were looking for candidates with more direct experience in urban topics, nature-based solutions, and climate resilience.”

Vodafone Ziggo — Discover Traineeship (Apr. 2026)

Outcome: No interview.

Feedback: “After carefully reviewing your CV and assessment results, we've decided not to move forward with your application at this stage. The match isn't quite there yet for this traineeship.”

“The good news is that you've received your Equalture Assessment results by email. They're worth a read and might be useful for whatever comes next.”
